# What Makes flexxform Unique?

Because One Size Doesn't Fit All

Have you ever noticed the lack of child-sized soft seating in our society? Possibly not, but here at Flexxform Designs, we did. Perhaps you've never watched a child swinging their legs to keep their feet from falling asleep... but we have. And maybe you've never seen a child sit cross-legged (with dirty shoes!) on a sofa, because the seat depth didn't accommodate their short legs. But we noticed.

We've also noticed that education is so much more than sitting at a desk and memorizing facts. Today's schools have become a realm where students can discover their talents and build 21st century skills. But collaboration, creativity, communication, flexibility - just to name a few of these skills - aren't easy to achieve in traditional school furniture like a plastic chair or wooden desk. These aren't comfortable for adults, nor children, and they certainly do not create an environment that puts students at ease to practice and enhance these skills. But soft seating does. As adults, we've experienced just how relaxed different types of sofas can make us. We've also proved that when we are relaxed, we are more willing to express ourselves and dive deeply into our creative and collaborative sides. But how can children do this, stuck on an oversized or uncomfortable chair where they can't relax?

As a result, we have designed soft seating to fit a child's height. But not only that: we also ensure that every chair design is offered in both child and adult sizes, meaning you can ensure continuity of design throughout any environment, while accommodating all ages.

We ensure every sofa is created with the devotion that young children deserve. Every piece in our seating collection features top-grade foam and is upholstered in a high-quality, easy-to-clean, vinyl that is made to last.

**The future of our world deserves our attention, and children are the future of our world.**

# What Makes flexxform Unique?

## We Factor In Cleanability

All of our graded-in vinyls are specifically selected to ensure no matter what you choose our product is easy to clean. Our stocked "Challenger" Vinyl can be cleaned with Oxivir TB, Opeis 146 Multi-quat Concentrate, Oxivir TB Wipes, Accel Prevention Wipes, Accel Prevention Concentrate, Isopropyl Alcohol, Virox 5 (concentrated), Oxivir Plus Concentrate, Regular Bleach, and Accel Fire TB.

But that all sounds complex. The Challenger Vinyl also has anti-stain, anti-bacterial, and anti-mildew properties, which means a simple soap and water will usually get rid of any stain!

## All of Our Products are Manufactured in North America

We pride ourselves in sourcing the majority of our componentry from domestic sources, and every one of our products are manufactured right here in North America.

## ENVIRONMENTAL STATEMENT

Our efforts to reduce the environmental impact of our products begin during the design and development phase. Whenever an existing product is changed, or a new one is being developed, we will take into account the environmental impact of the materials chosen; including their origin, use of our products, and end-of-life recovery options. Employing this concept, we give preference to renewable, recycled, recyclable and biodegradable materials and will also make design considerations to conserve raw materials, water and energy.

Each design prototype must be assessed by the Flexxform Designs Design for Environment (DfE) Program during product realization prior to the actual manufacture of the final product. This tool assesses the environmental performance of both the proposed product itself and the processes that would be used to manufacture it. At a minimum this analysis must consider the following DfE elements:

- Renewable materials
- Recycled Materials
- Recyclable and biodegradable materials
- End of life management
- Water management
- Energy efficiency

DfE is an iterative process: Output generated from the analysis of each design prototype using the Flexxform Designs DfE Program must inform the next generation of the design process until the desired environmental performance of the final product is achieved.
